Objective

Passionate and self-driven Software Engineer proficient in Back End and Agentic AI Development using Langchain, Langraph, OpenAI SDK. And FastAPI. I have 1 year of teaching experience with private institutes. I am passionate about helping students make a career in the field of Programming and Development.

Skills

Programming: Python, JavaScript (ES6+)

Web: HTML5, CSS3, Backend: FastAPI, Flask, RESTAPIs

AI & ML: Generative AI, LLMs, Agentic AI (LangChain, LangGraph), OpenAI, Hugging Face, Gemini, Numpy, Pandas

Databases: MongoDB, PostgreSQL, MySQL

Version Control: Git, GitHub

Tools & Platforms: Jupyter Notebooks, Google Collab, Postman, VS Code, Pycharm, Excel, Linux

Core CS: Data Structures & Algorithms (DSA), Object-Oriented Programming (OOP), Operating Systems, DBMS, Computer Networks

Relevant Work Experience:

Teaching at IEC

Delivered structured instruction in Python programming, covering core fundamentals such as syntax, control flow, and data types, and progressing to intermediate and advanced concepts including Object-Oriented Programming (OOP), functional programming paradigms, decorators, and efficient file handling.

Provided hands-on training in industry-relevant libraries and frameworks such as NumPy, Pandas, Tkinter, and FastAPI, with practical experience in designing and developing RESTful APIs, working with JSON data, and integrating databases using MongoDB Atlas. Additionally, mentored students in data structures and algorithms aligned with current industry hiring requirements, strengthening their problem-solving skills and job readiness.

Education

BS Computer Science (2021)
Riphah International University

Projects

AI Campus Admin Agent | FastAPI, MongoDB, LangGraph, LangChain, Gemini | [GitHub]

- Developed an AI-powered campus administration system, integrating LangGraph and Gemini for intelligent query handling and automation.
- Implemented CRUD operations for student management using MongoDB.
- Added Analytics
- The system retains memory and responds in stream or without it if required.

URL Shortener with QR Generation | Flask, SQL, Segno, Jinja2, beautifulsoup4, cryptography | [GitHub]

- This takes a long URL and converts it to a shorter version using redirects from website
- Added User Account and hashing passwords.
- The redirected URL is also converted into QR Code, and The QR Code Image blob is saved into the database.
- Each URL's title is also scraped and stored using bs4.

ATM Machine Simulator with file handling | Functions | Simple File Handling and JSON |GitHub|

- This was a simple ATM Machine Simulation that allowed user to:
- Create Account, Deposit Money, Withdraw Money
- Stored Data in notepad in form of JSON
- Authenticated users could login using PIN code.

Additional Skills

- Documentation
- Working with Teams and Collaboration
- CMS Management
- Working Under Pressure
- Classroom Management
- DSA
